OFFICIAL PRODUCT & COMMERCIAL BLUEPRINT

Platform Capabilities, System Architecture & Commercial Pricing Strategy

A comprehensive functional audit of RxNXT Cloud modules, technical differentiators, and a recommended Standard vs. Add-On packaging model for commercial go-to-market.

1 Executive Summary & Platform Identity

> **What is RxNXT?** RxNXT is a high-velocity **Clinic Operating System (Clinic OS)** that enables Indian doctors to write complete, legally compliant electronic prescriptions in **under 30 seconds**, while delivering instant digital prescriptions and structured daily medication schedules directly to patient WhatsApp without requiring patients to download any app.

Legacy electronic health record (EHR) platforms fail in Indian outpatient departments (OPDs) because they impose high typing friction on doctors seeing 30 to 80 patients per day. RxNXT solves this through **Additive Search Scoring** (learning doctor prescribing habits), **1-Click Curated Protocol Bundles**, and **Direct Meta WhatsApp Cloud API integration** (delivering zero-cold-start messaging with attached official PDF prescriptions).

END-TO-END CLINIC PATIENT JOURNEY

STEP 01
Reception Triage
Fast mobile-based registration, vitals logging (BP, Pulse, SpO2) and token queue generation.

STEP 02
Doctor Consultation
Prescribes via habit-scored search or 1-click clinical protocol packs with live A4 preview.

STEP 03
Instant Delivery
Patient instantly receives Super-Prescription on WhatsApp with official NMC-compliant PDF.

STEP 04
Care & Adherence
Single morning daily briefing covering all doses, follow-up alerts, and Day-25 chronic refills.

2 Complete Functional Module Breakdown (What RxNXT Actually Does)

🩺 Module 1: High-Speed Clinical Prescription Workspace (`/doctor/prescription`)

Users: Doctors, Specialists, Medical Officers

The core consultation interface optimized for minimum keystrokes and rapid patient turnover.

- ✓ **Additive Clinical Scoring Engine:** Exact alias short-circuits (e.g. typing "PCM" brings Paracetamol to rank #1 instantly) + Doctor frequency weight (+50 pts) + Clinic preference weight (+20 pts).
- ✓ **Curated Clinical Protocol Bundles:** 1-click execution of standard treatment regimens (Viral Fever, Hypertension, Type-2 Diabetes, Acute Gastritis) that prefill drugs, strengths, routes, frequencies, and durations.
- ✓ **Live Sticky A4 Preview Rail:** Real-time reactive rendering of the final print-ready prescription alongside the input form. Eliminates guesswork and preview modal delays.
- ✓ **Regulatory Safety Enforcements:** Automatic Schedule X / Narcotic drug blocking (in strict adherence with Indian Telemedicine Practice Guidelines 2023) and mandatory dosage frequency/duration verification.
- ✓ **Instant Browser-Side PDF Engine (`jsPDF`):** Compiles official prescription documents in <250ms with doctor registration numbers, council credentials, clinic letterhead, and tamper-evident QR codes. Consumes zero server compute.

📋 Module 2: Patient Registration, Queue & Triage Desk (`/receptionist/dashboard`)

Users: Receptionists, Triage Staff, Front Office

Manages front-desk patient intake, queue ordering, and preliminary clinical vital capture.

- ✓ **Fast Registration & Duplicate Prevention:** Intelligent mobile number normalization (+91 sanitization) with real-time detection of existing patient records to eliminate fragmented clinical histories.
- ✓ **Live Token Queue Management:** Automated token sequencing (e.g. `#RX-001`, `#RX-002`) with live status transitions (`WAITING`, `IN_PROCEDURE`, `RETURNED_READY`, `COMPLETED`).
- ✓ **Comprehensive Vitals Triage Logging:** Captures Blood Pressure (systolic/diastolic), Pulse rate, Body Temperature, Weight, Height, and SpO2. Vitals automatically populate on the doctor's consultation desk.

Module 3: Meta WhatsApp Cloud API Patient Communication

Users: Outpatients & Family Caregivers (Zero Mobile App Needed)

Direct server-to-server messaging via official Meta Graph API v20.0 with approved Utility templates.

- ✓ **Instant Super-Prescription Dispatch:** Delivered immediately upon consultation completion with a structured dosage breakdown (Morning, Afternoon, Night) and a direct link to the official downloadable PDF.
- ✓ **Consolidated Daily Morning Briefing (8:00 AM IST):** Groups all prescribed medications across Morning, Afternoon, and Night into a single morning alert. Eliminates spam while ensuring patients never miss afternoon or bedtime medications.
- ✓ **Automated Follow-Up Appointment Alerts:** Sends a personalized reminder on the doctor's advised follow-up date to maximize OPD return consultation rates.
- ✓ **Chronic Care Day-25 Refill Alerts:** Automatically reminds long-term care patients (courses >14 days) to schedule consultation refills 5 days before their current medication pack exhausts.
- ✓ **DPDP Act & Consent Architecture:** Automatic unsubscribe handling; if a patient replies "STOP", the system immediately pauses outgoing reminders in compliance with Indian privacy laws.

Module 4: In-House Clinic Pharmacy & Inventory (`/pharmacist/*`)

Users: In-House Dispensary, Clinic Pharmacists

Connects doctor prescribing directly to dispensary stock reduction and revenue reconciliation.

- ✓ **Batch & Expiry Management:** Tracks batch numbers, expiry dates, rack locations, unit cost prices, and MRP selling prices per drug.
- ✓ **1-Click Prescription Dispensing:** Pharmacist dashboard displays pending prescriptions in real-time. Dispensing `DispenseLog` automatically decrements inventory count and creates an auditable
- ✓ **Low-Stock & Expiry Early Warnings:** Highlights critical inventory shortages and items nearing 60-day expiry to prevent clinical stock-outs.

Modules 5 & 6: Invoicing Desk & Clinic Staff Management (`/admin/*`)

Users: Clinic Owners, Practice Managers, Administrators

Financial reconciliation, multi-user role management, and clinic profile customization.

- ✓ **Multi-Line Consultation Billing:** Consolidates doctor consultation fees, pharmacy line items, diagnostics, and discounts with payment tracking (`CASH`, `UPI`, `CARD`).
- ✓ **Direct Doctor Onboarding:** Zero-friction doctor sign-up and clinic workspace provisioning without administrative registry delays, allowing doctors to self-register and start prescribing immediately.
- ✓ **Practice Letterhead & Profile Customization:** Upload clinic logo, customize letterhead branding, upload doctor digital signatures, and format doctor qualifications (`MBBS`, `MD`) on prescriptions.
- ✓ **Role-Based Access Control (RBAC):** Strict clinic-level data tenancy isolating `doctor`, `clinic_admin`, `receptionist`, `nurse`, and `pharmacist` records between

3 Product Team Packaging Strategy: Standard vs. Add-On Matrix

To maximize market penetration while protecting software gross margins (>80%), features must be structured into a **Core High-Value Base** and **Usage-Based / Expansion Add-Ons**.

FEATURE / CAPABILITY	PACKAGING STATUS	COMMERCIAL LOGIC	SUGGESTED PRICING
Doctor Prescription Workspace Additive search, live preview, PDF gen	Core Standard	Zero server compute (runs in browser). Drives primary doctor stickiness.	Included in Base
Receptionist Token Queue & Vitals Intake desk, live token statuses	Core Standard	Essential for single-doctor and polyclinic workflow integrity.	Included in Base
Instant WhatsApp Super-Prescription 1 template message + PDF download link	Core Standard	Cost is negligible (1 msg $\approx$ ₹0.13 per consultation). High perceived value.	Included in Base
Automated Follow-Up Reminder 1 WhatsApp message on advised revisit date	Core Standard	Directly increases clinic revisit footfall and doctor retention.	Included in Base
Direct Doctor Onboarding Instant self-registration & workspace setup	Core Standard	Zero administrative friction. Enables instant clinic activation.	Included in Base
Automated Daily Morning Reminders Daily 8 AM WhatsApp schedule for course duration	Monetizable Add-On	Direct variable cost. Covers ~250 acute or ~70 chronic patients/mo.	**₹299 / month** (1,000 msgs cap; overage ₹0.25)
Chronic Care Day-25 Refill Alerts Monthly WhatsApp alert for chronic patients	Monetizable Add-On	1 message/patient/mo. Covers 500 unique chronic patients.	**₹199 / month** (500 msgs cap)
In-House Pharmacy & Batch Stock Inventory tracking, batch expiry, dispense logs	Expansion Add-On	Relevant only to clinics with dispensaries. High willingness to pay.	**₹499 / month**
Additional Doctor Seats Secondary doctor logins under same clinic	Seat Expansion	Scales with clinic size without increasing base infrastructure load.	**₹2,499 / doctor / yr**

Why Daily Morning Reminders MUST Be a Separate Add-On / Opt-In:

Each WhatsApp utility message carries a direct cost of $\approx ₹0.13$. If an acute or chronic patient receives daily alerts for a 14-day course, that is 14 messages ($\approx ₹1.82$ per patient). A clinic seeing 1,000 patients a month could accumulate over ₹1,800 in direct messaging fees. Keeping this toggle **OFF by default** in the consultation modal protects software gross margins, while allowing clinics to purchase **Patient Adherence Packs** as a premium service.

Add-On Package Quotas & Profit Margins for RxNXT:

₹299 / mo Plan (1,000 Messages Cap)

Covers ~250 acute or ~70 chronic OPD patients.

RxNXT Profit: ₹162.50 / mo (54.4% Margin)

₹199 / mo Plan (500 Refill Messages Cap)

Covers 500 unique monthly chronic patients.

RxNXT Profit: ₹128.00 / mo (64.3% Margin)

4 Recommended Commercial Pricing Tiers (Annual Billing)

Solo Practitioner

Effective: ₹750 / month

For independent clinics & solo doctors

₹8,999 / year

- ✓ 1 Doctor Seat + 1 Reception Desk
- ✓ Unlimited Prescriptions & PDFs
- ✓ Instant WhatsApp Delivery
- ✓ 1-Click Clinical Protocols
- ✓ Patient Vitals & Queue Management
- ✓ Practice Letterhead & Profile Setup
- ✓ Follow-up Visit Alerts

MOST POPULAR

Clinic / Polyclinic Pro

Effective: ₹1,666 / month

For multi-doctor clinics & centers

₹19,999 / year

- ✓ Up to 4 Doctor Seats + 2 Reception Desks
- ✓ Everything in Solo Plan
- ✓ In-House Pharmacy & Batch Stock
- ✓ Prescription Dispense Billing
- ✓ Full Consultation Invoicing
- ✓ Practice Volume Analytics
- ✓ Includes 1,000 Reminder Credits

Hospital OPD Enterprise

Custom enterprise onboarding

For nursing homes & hospital chains

₹49,999 / year+

- ✓ Unlimited Doctor Seats & Desks
- ✓ Multi-Counter Queue Management
- ✓ Custom WhatsApp Phone Number ID
- ✓ Dedicated Green Tick Assistance
- ✓ Bulk Pharmacy Store Reconciliation
- ✓ API & Export Connectors
- ✓ Priority 24/7 Account Manager

UNIT ECONOMICS & INFRASTRUCTURE MARGIN ANALYSIS

Because RxNXT leverages client-side PDF rendering, serverless edge compute, and direct Meta Cloud APIs (bypassing Twilio markups), infrastructure hosting costs per clinic are exceptionally low.

5 Marketing & Sales Positioning Guidelines

🎯 Primary Sales Value Pitch

"RxNXT is the only clinic platform designed around the 30-second doctor consultation. Write prescriptions faster than paper, comply 100% with NMC guidelines, and keep your patients coming back with automated WhatsApp reminders without asking them to install any app."

🛡️ Clinical Safety & Compliance Differentiator

Built-in validation checks against Indian Schedule X and Narcotic substances protect clinics from telemedicine non-compliance, while doctor registration details and digital signatures are cleanly embedded on every generated PDF.
