1. PER-CLINIC EARNINGS & UNIT ECONOMICS

Breakdown of Subscription Revenue, Operational COGS, and Net Margins by Tier

EXECUTIVE MARGIN SUMMARY: HIGH CONTRIBUTION SAAS MODEL

RxNXT operates on an asset-light cloud architecture where software delivery costs are governed strictly by WhatsApp utility message units (13 paise/msg) and serverless micro-duty cycles. Because database and compute overhead per consultation is <0.02%, RxNXT delivers exceptional net contribution margins of 70% to 75% across all three subscription tiers.

EXECUTIVE FINANCIAL CONCLUSION FOR FOUNDERS & INVESTORS

1. Cash-Flow Positive from Cohort 1: RxNXT generates Rs 4.28 Lakhs in net profit from its first 55 local clinics, requiring zero external bridge capital to sustain cloud operations.
2. Compounding Retained Earnings: Because the software is 100% built, new clinic subscriptions do not incur new engineering overhead - every Rs 100 in subscription translates to Rs 70-75 in gross contribution.
3. The High-Value Polyclinic Leverage: Onboarding just 60 polyclinics (Tier 3) alone yields ~Rs 10 Lakhs in annual net profit, making enterprise clinic acquisition exceptionally high ROI.
